Few things come as useful as a compass and you rarely find one when you need it. Compus is a simple compass app to find your bearings on the go. He's got a clear compass in his pocket, though it's too simplistic. Although all iPhones are equipped with a standard Compass app, its accuracy is far from ideal. Compus is an alternative iOS compass app. It uses the phone's magnetometer to determine real-time orientation relative to the Earth's magnetic field. The application is extremely simple, to the point that it prefers bare bones. Since there is no option to talk or set settings, Compus is as basic as a compass will be. You can see the current coordinates and cardinal orientation. You can also specify the angle that the current orientation will form with the real North. The angle is expressed in standard degrees. No other angular units are available. Compus is free to download, supported by ads that interrupt the compass every few minutes. Adding insult to the damage, many of them have no visible exit button. These leave you no choice but to exit the app or click on the ad. Where can I run this program? Compus should run smoothly on any iOS 7 device (or later) equipped with a magnetometer. It's also compatible with Retina displays on iPhone 4. Is there a better alternative? Yes. If you need a feature-rich compass app, you can use Altimeter GPS Pro, which also measures height and other variables. With a simple compass for navigation, Commander Compass is super useful map overlays.Compus is not the worst compass application you can find, but it is more limited than most compass applications on the market. This is hardly a step up from the built-in Phone compass app. While handy in a tweak, the user experience surrounding the ads is very frustrating. Download? Compus doesn't have options or special features that include ads that interfere with normal use. The built-in compass is already good enough to use.
